Troubleshooting
Why is the phone LCD screen blank?71
Why does the phone display "Network Unavailable"?71
Why can't I get a dial tone?71

Getting Started

Packing List

The package contains the following parts, please check if all the items are not missed:

1. The phone device

2. The footstand

3. Handset

4. Headset cord

5. Power adapter

6. Ethernet cable

7. Quick installation reference

Phone Installation

1. Attach the Foot stand

2. Connect the Handset and optional Headset

3. Connect the Network and Power

Initialization

After your phone has been powered up, the system boots up and performs the following steps:

Automatic Phone Initialization

The phone finishes the initialization process by loading the saved configuration. The phone LCD screen will display "Booting"

And then show "Initializing "during the initialization.

By default the phone attempts to contact a DHCP server in your network in order to obtain its valid network settings, e.g. IP address, subnet mask, default gateway, DNS server.

Upgrade

To upgrade software, this phone can be configured with a TFTP server where the new code image is located. The TFTP upgrade can work in either static IP or DHCP mode using private or public IP address. It is recommended to set the TFTP server address in either a public IP address or on the same LAN with the phone.

To configure the TFTP server via the Web configuration interface

Input the admin password to enter the configuration screen. From there, enter the TFTP server address in the designated field towards the bottom of the configuration screen. Once the TFTP server is configured, please power cycle the phone.

TFTP process may take as long as 1 to 2 minutes over the Internet or just 20+ seconds if it is performed on a LAN. Users are recommended to conduct TFTP upgrade in a controlled LAN environment if possible. For those who do not have a local TFTP server, Hanlong provides a NAT-friendly TFTP server on the public Internet for firmware upgrade. Please check the Service section of Hanlong's Web site to obtain this TFTP server's IP address.

Directory to configure local TFTP

- 1. Unzip the file and put all of them under the root directory of the TFTP server.
- 2. The PC running the TFTP server and the UC IP PHONE should be in the same LAN segment.
- 3. Go to File -> Configure -> Security to change the TFTP server's default setting from "Receive Only" to "Transmit Only" for the firmware upgrade.
- 4. Start the TFTP server, in the UC IP PHONE's web configuration page.
- 5. Configure the Firmware Server Path with the IP address of the PC.
- 6. Update the change and reboot the unit.

	Upgrade Check Mode :		

NOTES:

When Hanlong IP Phone boot up, it will send TFTP or HTTP request to download configuration files, there are two configuration files, one is "cfg.txt" and the other is "cfg001fc1xxxxx", where "001fc1xxxxx" is the MAC address of the phone. These two files are for initial automatically provisioning purpose only, for normal TFTP or HTTP firmware upgrade, the following error messages in a TFTP or HTTP server log can be ignored.

Download and install a free TFTP or HTTP server to the LAN to perform firmware upgrades. A free Windows version TFTP server is available:

http://www.solarwinds.com/products/freetools/free_tftp_server.aspx.

To upgrade manually via the Web configuration interface

Download the firmware.

Click Management \rightarrow Upgrade

Click Brower or the blank.

Select the firmware and then click

Upgrade

Restart.

Troubleshooting

Why is the phone LCD screen blank?

- 1. Ensure your phone is properly plugged into a functional AC outlet.
- 2. Ensure that the phone isn't plugged into a plug controlled by a switch that is off.
- 3. If the phone is plugged into a power strip, try plugging it directly into a wall outlet instead.
- 4. If your phone is powered from PoE, ensure you use a PoE compliant switch or hub, or contact your system administrator for more information.
- 5. Check that the power LED is on to ensure the phone is powered on.

Why does the phone display "Network Unavailable"?

- Ensure that the Ethernet cable is plugged into the Internet port on the phone and the Ethernet cable is not loose.
- Ensure that the switch or hub in your network is operational.
- Contact your system administrator for more information.

Why can't I get a dial tone?

- Check for any loose connections and that the phone has been installed properly. For the Installation instructions, refer to <u>Phone Installation</u>.
- Check whether dial tone is present on one of the audio modes.
- Switch between the Handset, Headset (if present) or Hands-Free Speakerphone to check whether dial tone is present for one of the audio modes.
- If the dial tone exists on another audio mode, connect a different handset or headset to isolate the problem.
